PosiSep® X is a hemostatic intranasal splint designed to minimize bleeding and edema and to prevent adhesions between the septum and the nasal cavity. PosiSep® X is placed in the nasal cavity after surgery or trauma. The PosiSep® line is constructed of a patient-comfortable sponge which is manufactured from naturally occurring Chitosan polymers. Subsequent irrigation will cause the product to fragment, thus optimizing patient tolerance and comfort.

- Fragments by way of gentle irrigation and aspiration
- Easy to apply—no mixing or additional prep time necessary

When PosiSep X is hydrated, it expands to fill the space preventing post-op adhesions.

What is Chitosan?
Chitosan (ky-toe-san) comes from a substance known as chitin, an amino-polysaccharide removed from the powdered shells of crustaceans.
